## Software Engineer

Dedicated to continued learning to demonstrate commitment to performance excellence.

### Core Values

- An agile workflow is complementary to having a get-up-and-go personality and accelerated learning curve.
  - Motivated by loosely defined goals such as research and development, creative assignments, and alternative solution exploration.
  - Accomplished team-oriented goal setting from many years in Retail, and University project courses.
- 

## Qualifications & Skills

---

Systems Experience	Programming Languages			
Linux Environments (Debian)	C/C++	C#	Java	HTML
Machine Learning Simulations	Python	Perl	JavaScript	ARM
Network Programming	Basic	PHP	Prolog	Lisp
Game Development	SQL	tcl	Makefile	CSS
Video Broadcasting Technologies	Smalltalk	Lua	Bash/Csh	

## Education & Specialization

---

**Vancouver Island University** 2017

**Bachelor of Science**, Major in Computing Science

**Relevant Courses:** Machine Learning for Predictive Data Analysis  
Software Engineering | Networks and Communication

## Projects Highlights

---

**PXIT Reader App** 2015

Android Phone App that reads images of PXIT codes (i.e. 3D QR codes) from the camera and creates files from the visual data. Find it on Play Store.

**Video Cloaking Software** 2015

Video cloaking delivers files to consumers by encoding the data into video streams without impacting size, quality, and playback of the video defined by current day standards.

**Invasion Force Clone** 2014

Converted text-based space adventure from the 80s cloned into a Java GUI edition.

**Project NaN** 2012

Designed and developed a multiplayer real-time strategy game made in HTML5.
